App demonstration

Problem

- The average person's mental and physical well-being has been on the decline in recent years.
- There is a lack of resources in place to support people
 - Over a third of adults said they lacked motivation to improve

Solution

- How Does Recharge Solve this?
- Encourages building healthy habits through various trackers
 - Provides users with easy access to mentor who can help with their struggles

Tool Introduction

Platforms

Android
IOS

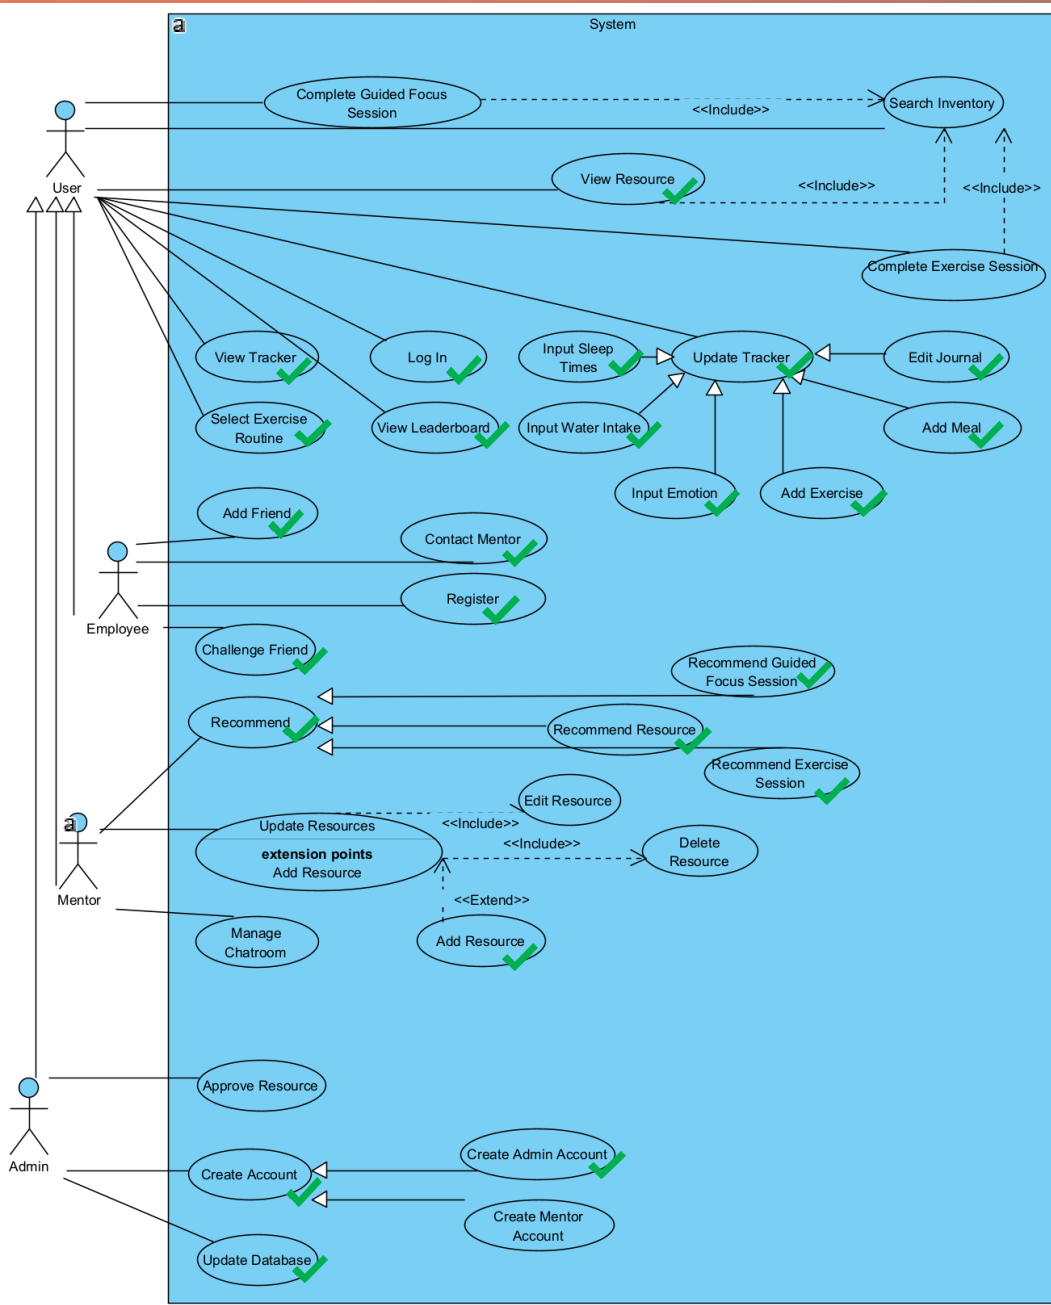

Frontend

React Native
with Expo CLI
Typescript
Component
Library – React
Native Elements

Backend

Supabase
(PostgreSQL)

Use case diagram

- Met almost all use cases like updating trackers, login, sign up chatrooms
- Some non-essential features not implemented due to time constraints
- Added extra functionality such as graphical representation of trackers like exercises, feedback and bug report system

Acceptance testing

- Register
- Exercise (Tracker)
- Contact Mentor
- Create Mentor Account
- Recommend Resource
- Add Friend

Acceptance testing will confirm that the prototype meets all performance and usability needs by running the app and taking it through real-world simulated situations.
